OXYGEN CONES OXYWISE

Our oxygen cones are used for mixing oxygen in the water. Their shape makes the saturation efficiency very high, up to 95%. Water and oxygen enter at the top of the cone at relatively high speed. The stream of water pushes the oxygen bubbles down until they completely dissolve.

| Design pressure: | 2 and 4 barG | | |
|------------------------|--------------|--|--|
| Material: | glass fiber | | |
| Saturation efficiency: | 95% | | |

OXYGEN CONES OXYWISE

- Water pump maximum outlet pressure should not exceed the cone design pressure.
- Pressure drop in cone is 0.2 to 0.3 bar.
- Water flow should be regulated in order to keep the optimum working pressure in the cone.
