RIX High Pressure Oxygen Compressors For Cylinder Filling

Phone +421 518 655 or FAX +421 33 774 0286 to discuss your special needs.

OXYGEN GENERATION AND CYLINDER FILLING

Air is compressed by the **Feed Air Compressor**, passed through an **Air Dryer** and stored in the **Air Storage Tank**. Regulated air is then fed into the **PSA Oxygen Generator** where oxygen is generated (typically 92% to 95% O₂, or high purity oxygen to 99.5% O₂) and stored. From the **Oxygen Storage Tank** regulated oxygen is fed into the **RIX High Pressure Oxygen Compressor** where the oxygen is boosted to tank pressure and fed to the **Manifold** and into the **High Pressure Oxygen Cylinders**. The RIX Oxygen Compressor that is needed is determined by the capacity of the PSA Oxygen Generator based on the number of high pressure oxygen cylinders to be filled each day.

PRODUCCION Y ENVASADO DE OXIGENO

Mediante un compresor, se comprime el aire, luego se seca y se almacena en un tanque para que luego de ser regulado es llevado al generador de oxígeno PSA donde se produce el oxígeno típico (92% a 95%) o de alta pureza (99.5%) y luego almacenado en un tanque a baja presión y El Oxígeno regulado es llevado a un compresor de oxígeno RIX de alta presión y a través de un manifold se llenan los cilindros a alta presión (2500 psi). La capacidad del compresor de oxígeno RIX será determinada por la capacidad productiva del generador de oxígeno PSA, y basándose en el requerimiento diario de cilindros de oxígeno.

WHY CHOOSE RIX OXYGEN COMPRESSORS?

Reliability, long service life, and safety.

RELIABILITY: Many of these machines have exceeded 5000 hours of dependable service before their first maintenance. With minimal service they continue to reliably fill high pressure oxygen cylinders.

LONG SERVICE LIFE: Operating up to 24 hours per day, these units have shown exceptional service giving years of duty between overhaul. Once serviced and put back on the job, these units continue to provide excellent dependable operation.

SAFETY: Excellent engineering, choice of materials and conservative design result in a safety record second to none. Hundreds of these machines are currently operating safely and dependably around the world under many different operating conditions.

POR QUE ESCOGER COMPRESORES DE OXIGENO RIX?

Confiabilidad, larga vida entre servicios, y seguridad.

CONFIABILIDAD: Muchas de estos compresores sobrepasan las 5,000 horas de trabajo eficiente antes de su primer servicio de mantenimiento y con este servicio mínimo seguirán llenando cilindros de oxígeno a alta presión.

LARGA VIDA: Estos equipos están diseñados para trabajar 24 horas diarias demostrando un trabajo ejemplar, dando años de operación después de un servicio completo.

SEGURIDAD: Un excelente diseño, materiales de primera y una garantía de operación se suman para dar como resultado una máxima seguridad de trabajo por encima de equipos similares. Cientos de máquinas están funcionando en todo el mundo en diferentes condiciones de trabajo.

Flow Conversions (O₂)

Based on 60°F for SCF, 0°C for Nm³, Nltr.
 5 SCFM x 60.0 = 300 SCFH
 600 SCFH ÷ 60.0 = 10 SCFM
 10 SCFM x 1.607 = 16 Nm³/H
 200 SCFH x 0.0267 = 5.3 Nm³/H
 30 SCFM ÷ 0.03732 = 804 Nltr/M
 1000 SCFH ÷ 2.239 = 446 Nltr/M
 25 SCFM x 2.3 = 57.5 Kg/H
 800 SCFH x .0383 = 30.7 Kg/H
 6 Nm³/H x .622 = 3.7 SCFM
 12 Nm³/H x 37.32 = 448 SCFH
 850 Nltr/M x .03732 = 32 SCFM
 400 Nltr/M x 2.239 = 896 SCFH
 20 Kg/H x .435 = 8.7 SCFM
 12 Kg/H x 26.1 = 313 SCFH

About RIX Industries

RIX Industries is a major manufacturer of state-of-the-art gas compressors for industrial, scientific, and military use. Applications include virtually all types of gases including air, nitrogen, oxygen, argon, helium, hydrogen, ethylene, carbon dioxide, natural gas, and a variety of mixed gas combinations.

While specializing in oil-free high pressure compressors, the RIX product line also includes other types of compressors from 1/10 to 500 BHP. Both oil-free and oil-lubricated units with one to five stages and a choice of air or water cooling are offered for use over a wide range of operating conditions.

RIX Industries was founded in 1878 to supply equipment for the shipping and mining industries and has been in continuous operation on San Francisco Bay since that time. Manufacturing facilities are currently located in California and Sparks (Reno), Nevada, USA.

Sobre RIX Industries

RIX es el mayor fabricante de compresores de gases de tecnología de punta, para aplicaciones industriales, científicas y militares. Las aplicaciones son para casi todo tipo de gases incluyendo, aire, nitrógeno, oxígeno, argón, helio, hidrógeno, acetileno, dióxido de carbono, gas natural y la mezcla de los mismos.

Especializados en compresores de alta presión libre de aceite, RIX también produce dentro de esta línea compresores desde 1/10 a 500 BHP. Tanto los compresores lubricados como los no-lubricados son desde 1 hasta 5 etapas y pueden ser refrigerados por agua o aire dependiendo de la aplicación.

RIX fue fundada en 1878 para suministrar equipos para la minería y el transporte naval, continuando su línea productiva hasta la fecha en la bahía de San Francisco. Las plantas se encuentran localizadas en California y Sparks (Reno), Nevada, USA.
